## Presentation

This Sustainable Health Management course addresses current and future trends in sustainable health development (indicators for better health management, design of spaces, processes, well-being) and evidence-based health (best practices, clinical trials, approach to patients, community interventions) in the context of social evolution, pandemics, climate change and its effects on health. The Sustainable Health Management course aims to develop the human, technical and scientific skills of its participants, and is based on the recognition and credibility of the training suitability of the teaching staff and the subjects they teach.

# STUDY PLAN

## 1st Year / Common Core
