Presentation

The Professional Master's program offers specialized training to address the growing developments in the job market. It aims to equip motivated and highly capable students with practical, hands-on training that is innovative on both national and European scales. The education is of exceptional quality, grounded in evidence-based practices and focused on acquiring skills for solving complex situations in real work contexts. The Master's program is offered in a hybrid format, encompassing both workday and after-work hours, with a combination of online and in-person classes. This structure allows students to better balance their academic and active professional lives, providing them with flexibility to study, acquire, and deepen knowledge while actively practicing their profession on a daily basis.
