Presentation

The Postgraduate Diploma in Companion Animal Medicine offers specialised training to meet the growing demands of the job market in the field of Companion Animal Medicine. It aims to provide professionals with `Hands-On` practical training that is innovative in the national and European context. This continuous lifelong learning (CPD) is based on the pillars of excellent teaching based on evidence and the acquisition of skills to resolve situations in work contexts. The post-graduate course, which takes place on and off the job, has a hybrid structure with online theoretical classes and face-to-face practical classes, allowing professionals to better reconcile the progress of their training with their personal lives.
