Presentation

The Postgraduate Diploma in Equine Clinic offers specialised training to meet the growing demands of the equine clinic job market. It aims to provide professionals with Hands-On practical training that is innovative in the national and European context. This lifelong learning programme (CPD) is based on the pillars of excellent teaching based on evidence and the acquisition of skills to resolve situations in work contexts. The post-graduate course, which takes place on and off the job, has a hybrid structure with online theoretical classes and face-to-face practical classes, allowing professionals to better reconcile the progress of their training with their personal lives.
