## Duration

0 Years

## Credits

0 ects

## Presentation

The digital transformation in education is an unavoidable reality. Technologies offer countless possibilities for innovating teaching practices, making learning more meaningful. However, technologies must be mobilised intentionally in the teaching, learning and assessment process, in a critical, strategic and pedagogical way. Through a practical and reflective approach, this action will provide an opportunity to discuss the potential of different technological resources, so that their mobilisation is intentional and coherent with the learning objectives
