## Duration

0 Years

## Credits

20 ects

## Presentation

Sustainable management of water resources and good water governance are essential for meeting the environmental, social and economic challenges of the 21st century. The course covers topics such as public policies, management instruments, ecosystem conservation and basin management, with an integrated and sustainable approach. The teaching staff is made up of leading specialists and academics at national level.

# STUDY PLAN

## 1st Year / Common Core

---

Anual	ects
