Presentation

Bits, bytes, code, games, social networks, artificial intelligence. We're living through the digital age in all its splendour and this is your chance to dive headfirst into the fascinating world of programming! The Programming Course is a one-week course where you'll learn to programme from scratch, using one of the most modern and interesting languages today: Python. Imagine starting your mornings with explanatory sessions, full of examples and practical exercises. In the afternoon, you'll get down to work and develop an incredible project: a smart calculator. Yes, you'll create your own software, from start to finish! By the end of the course, you'll have mastered the basics of programming and be able to programme in Python like a true hacker. Our methodology is simple and straightforward, with plenty of support from the teacher in class to ensure that you learn in a fun and effective way. Are you ready to become a coding master? Come along to our Summer School and discover the power of programming!
